Aditya Sameer Nalawade
SDE intern

A tech-savvy, results-driven student, I'm passionate about innovation and learning in Computer Engineering. I excel in Python and Generative AI, building scalable, intelligent apps, and leverage Flask for robust backend solutions, eager to deliver impactful results in dynamic tech spaces.

PROFESSIONAL EXPERIENCE

SDE Intern
Level SuperMind
- Present
Lower Parel

Backend Developer | GenAI Developer | DevOps Practitioner contributing to SuperSoul, an upcoming innovative product. I design scalable backend systems, develop intelligent AI solutions using Python and Generative AI, and manage cloud infrastructure on AWS EC2 alongside various AWS services for seamless deployment and operations. Passionate about innovation, I blend performance, automation, and scalability to deliver impactful, reliable applications.

EDUCATION

Pillai HOC College of Engineering and Technology
B.E. Computer Engineering
2023 - Present
Grade - 7.9
Rasayani

PROJECTS

SuperSoul
Level SuperMind
SDE Intern
StartDate : 2025-01-28
Its an Astrology app , leveraging AI for astrology based predictions . A competitor of Astrotalk . SuperSoul is soon to be launched Product and a company competing with Astroltalk the current company with major market share .

TexTube
Personal Project
Developer
TexTube is a Python-based desktop app that effortlessly transcribes YouTube videos into text using OpenAI's Whisper model. Simply paste a YouTube link, choose from four Whisper models, and let the app handle everything from downloading audio to providing a clean transcription. With a modern, PyQt5-powered interface, users can enjoy real-time progress updates and easily manage long video transcriptions through chunk-based processing. Whether you need quick notes or detailed content, TexTube makes transcribing YouTube videos a breeze.

Cold Email Generator

Personal Project

Developer

Cold Email Generator 🪁 is an AI-powered web application designed to automate the creation of personalized cold emails for business outreach. By leveraging Natural Language Processing (NLP) and AI, the app extracts job requirements from webpages and matches them with relevant portfolio projects. Users can easily upload their portfolio, define company context, and generate tailored emails with just a few clicks. With its sleek, user-friendly interface built on Streamlit, the app ensures an engaging and efficient experience for businesses looking to streamline their email outreach.

AdVance

Hackathon Project

System Architect & Frontend developer

AdVance is a groundbreaking web application designed to transform how users interact with digital advertisements and competitive analysis. Developed from scratch without external frameworks, it delivers powerful features like comprehensive search, sentiment analysis, trend graphs, and AI-powered summaries. The app provides actionable insights from multiple sources, making it ideal for marketers and business leaders looking to outsmart competition. As a national hackathon winner, AdVance demonstrates exceptional technical skill and innovation with a responsive, intuitive design that works seamlessly across devices.

NoteBot

Personal Project

Developer

NoteBot is an AI-powered learning platform designed to help users understand complex engineering concepts through interactive chat and structured resources. With features like AI-driven explanations, PDF uploads for content-specific queries, and a modern, responsive design, it provides a seamless learning experience across all devices. Built from scratch without external frameworks, NoteBot showcases advanced web development skills and offers a highly customizable and engaging interface for users seeking in-depth knowledge in engineer.
